Art Unit: 3726

1. In view of the newly cited art, the indication of allowability of claims 1-4 is withdrawn.
2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 and 15-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art in view of Millard et al (2,419,724).

The admitted prior art set forth in Figs. 1-9 and related text set forth in the specification is considered to teach the claim limitations except for the limitations directed to canceling elastic recovery found in the last paragraph of the independent claims and the adjusting limitations of claims 16-18. Millard teaches that it was known to form presses with non-parallel surfaces to compensate for elastic recovery. See Figs. 1 and 4-7 and related text, especially the sentence extending from col. 2 to col. 3. It would have been obvious to modify the processes and apparatus of the prior art to provide pressing surfaces adjusted to compensate for elastic recovery in view of Millard et al's teaching that the process and apparatus for compensating for spring back were known. The limitations of claims 16-18 to adjusting the pressing angle for workpiece size, thickness or material are considered to be routine matters of experimentation. It

is noted that there is no disclosure of new or unexpected results arising from these adjustments.
